

JG Foods — what we built this evening.

Everything added since the first summary — based on Jon's email, six spreadsheets, and a set of new ideas. All in plain English.

SOURCES

What we worked from tonight

Jon's email	Six spreadsheets	New ideas
Detailed feedback on how he runs the business — ordering, pricing, seasonal priorities, Christmas VIP process and his full weekly workflow.	Bank Payments, Invoices (50+ trade customers), Monthly accounts, Weekly reconciliation, Daily sales figures and the Delivery Temperature log.	Smart customer lookup, social post automation, WhatsApp link previews, About section, delivery temps linked to runs, and a new social graphic template.

CUSTOMER-FACING WEBSITE

What changed on the website

Trade section	Trade accounts live as a proper section within the website — benefits, enquiry form, who we work with. One website, not two.
Minimum order & delivery charge	Orders under £20 get a £5 charge added automatically. Configurable by Jon in the admin — no developer needed.
Standing orders	Customers can set up weekly or fortnightly recurring orders, paid upfront. Clearly explained at checkout.
First order free gift	New customers offered free sausages or bacon on their first delivery. Banner on homepage and noted in the order for Jon.
Smart account types	Domestic customers self-register and are automatically domestic. Trade accounts are set up by Jon after an enquiry.
WhatsApp & social preview	Sharing the website URL now shows a branded preview card on WhatsApp, Facebook and iMessage.
About section	Jon's background and JG Foods' story — who he is, a quote from Jon, trust stats, and why customers choose him.

JON'S MANAGEMENT TOOL

What changed in the admin

Smart customer lookup	Jon types a name, the system finds matching past customers and fills in their details. No account needed from the customer.
Auto social posts	Saving the weekly availability drafts both Facebook and Instagram posts automatically — better-worded copy, not just a raw price list.
Social graphics template	New navy and gold graphic template to match the website. Jon does a great job already — this takes the look even further.
Christmas VIP list	Top customers get a personalised AI-drafted text before Christmas marketing goes out — first access to last delivery slots.
Delivery temperature log	Monthly grid for environmental health compliance. Colour-coded. Linked to delivery runs so the right customers appear automatically.
Invoice generator	Matches Jon's existing format — bank details, VAT number, per-customer prefix all pre-filled. Actions dropdown: View, Print, Send via email, Send via message.
Pre-written messages	Invoice emails and texts have a warm message already written for trade and domestic customers. Jon just presses send.
Daily sales logger	Quick bank/cash entry per delivery day. Weekly totals auto-calculate. Pushes to the weekly sheet in one button.
Weekly reconciliation	Matches Jon's weekly sheet — 12 suppliers, expenses with VAT, banked total. Filled in every Friday as he does now.
Bank payments tracker	All trade customers, payment by day, outstanding balances — matches his Bank Payments spreadsheet.
Monthly accountant export	Income and expenditure matching Jon's accountant format. One button at month end.
Friday checklist	Jon's full Friday routine as tickable items that save state and reset each week.
GDPR retention flag	Customers inactive 2+ years flagged automatically on the Customers page for data review.
Referral gift flag	When adding a new customer, Jon fills in a "Referred by" field. The customer's card is flagged with a gift reminder so Jon knows to include a free sausage or bacon on their first delivery. The flag clears once the first order is done.
Minimum order exemption	Each customer profile has an "Exempt from minimum order charge" tick box. Tick it once for family and friends — the £5 small-order surcharge will never apply to them automatically.
In-app help guide	A floating ? button on every page opens a slide-in help guide. It automatically shows content for whichever page Jon is on, with plain-English explanations for every feature. A search bar lets him find anything across all nine pages in seconds.

♦ AI — BUILT BY AXRIK

AI features added this session

More AI baked in tonight — each one removes a manual task Jon currently does by hand.

- Customer name lookup auto-fills details from past orders — no account needed
- Facebook & Instagram posts drafted automatically when availability is saved
- Christmas VIP messages AI-drafted and sent to the whole list in one tap
- Invoice emails and texts pre-written per customer type — Jon just presses send
- Optimised delivery route planning via Google Maps API
- Automated daily reminders to trade customers — coming once Twilio is connected

Next steps to go live

1

Supabase database setup

Everything runs on sample data. Connecting the database makes it live — real customers, real orders, real invoices.

2

Per-customer invoice products

Jon's 50+ trade customers each have their own product list. Loading these from his spreadsheet unlocks the full invoice generator.

3

EmailJS — invoices & notifications

Wires up the send buttons on invoices and the order confirmation on the website.

4

Twilio — reminders & VIP texts

Daily trade customer reminders and Christmas VIP messaging through one Twilio account.

5

Google Maps API key

10-minute setup to activate the optimised delivery route planning. Phil handles this.

6

Social media graphic template

New graphic wired into the admin so it generates automatically alongside the post copy.

7

Go live at jgfoods.co.uk

Deploy to Netlify, walk through with Jon, load real products, switch it on.
