

JG Foods

MOBILE BUTCHER • NORTH LIVERPOOL, ORMSKIRK & WEST LANCASHIRE

Try it out — your testing worksheet

A simple walk-through of your new website and admin system. Take your time over the next few days.

Hi Jon — this is your playground. Nothing here is live to real customers yet, so **click everything, place pretend orders, make mistakes — you can't break it**. Work through each section and tick the box as you go. Jot down anything that feels off and send it over.

You'll need: your **website** address, your **admin** address (admin.jgfoodsnorthwest.com) and the **email & password** I set up for you. When you're done testing, the last section shows you how to wipe all your practice data so you start clean on day one.

1. The website (what your customers see)

Open it on your phone and a computer if you can — it should look good on both.

- ☐ **Look around the homepage.** Check the wording reads right — including “North Liverpool, Ormskirk & West Lancashire” and the refer-a-friend free sausages/bacon banner.
- ☐ **Read the “About” section.** Have a proper read of your story and who you are. Does it sound right and like you? Let me know if it's spot on, needs a few tweaks, or you'd rather we rewrote it from scratch.

A favour: a good photo of you next to the van would be brilliant for the website — it puts a face to the name, and customers really warm to that. Send one over whenever you can.
- ☐ **Browse this week's products.** These come from your Availability list in the admin. Empty? That's because you haven't added products yet (section 2).
- ☐ **Place a pretend order.** Add items, go to checkout, use your own name/phone/email and an address, pick a delivery day, submit.
- ☐ **Check it arrived.** Open the admin → Delivery Runs. Your order should be on the day you chose.
- ☐ **Try the contact form.** Scroll to the bottom (Contact) and use the “Send Jon a message” form. Fill it in and send — you should get the message come through to your email. That's a customer enquiry landing with you automatically.

2. Logging in & your products

- ☐ **Log in to the admin** at admin.jgfoodsnorthwest.com with your email and password.

- ☐ **Add a few real products.** Availability → + Add product. Name, category, price, switch it Live. Add a photo if you like. These show on the website and in the order/invoice dropdowns.
- ☐ **Edit a price.** Tap a price to change it. Turn a product off with the Live toggle and check it disappears from the website.

3. Taking orders

- ☐ **Log an order by hand.** Log Order → Enter manually. Customer name, phone, address, items, a delivery day → Save order.
- ☐ **Try the “paste a message” magic.** Log Order → Paste a message. Paste a pretend WhatsApp order (“Hi Jon, can I get 2x chicken fillets and a BBQ pack for Monday please? It’s Dave, 9 Elm Close, 07700 000000”) and press Extract details. It fills the form for you. Always check before saving.

Good to know: every order you save automatically creates a **receipt** (home customers) or an **invoice** (trade customers). You don’t have to write them out.

4. Receipts & invoices

- ☐ **Find the receipt** from the order you just logged: Invoices page → Saved invoices & receipts list. (Refresh if it’s not showing yet.)
- ☐ **Open it as a PDF.** Actions → Download PDF. Check it looks smart with your JG Foods header, items and bank details.
- ☐ **Send it on WhatsApp.** Actions → Send via WhatsApp. WhatsApp opens with the message and PDF link ready. Tap the link to check the PDF opens.
- ☐ **Send it by email.** Actions → Send via email. Your Gmail opens filled in. Send it to yourself and check it arrives.
- ☐ **Build one by hand & log a payment.** At the top of Invoices, pick a customer, add items, Generate then Save invoice. On an unpaid one, press Log payment and mark it paid.

5. Your delivery days & runs

- ☐ **Set your usual days.** Schedule → turn on the days you deliver and Save. Try taking a day off and adding a one-off day.
- ☐ **Look at a delivery run.** Delivery Runs → tap a day. You’ll see the orders, a pick list, and quick temperature entry.
- ☐ **Plan the route.** Press Plan route, then Open in Google Maps for real directions.

6. Money & your spreadsheets

- ☐ **Enter a day’s takings.** Finance → Daily Sales → + Add day. Date, bank, cash. It saves on its own — refresh and check it’s still there.
- ☐ **Import an old spreadsheet (optional).** On Daily Sales, drag a past takings spreadsheet onto the Import past takings box (needs Date, Bank, Cash columns). Do this whenever you’re ready — no rush.

- ☐ **Look at the other tabs.** Weekly, Bank Payments and Monthly (for your accountant). Check the top figures (Paid, Unpaid, Overdue) look sensible as you add invoices and payments.

7. Social posts & VIPs

- ☐ **Write a Facebook/Instagram post.** Social → jot a few notes, press Generate post, tweak it, Copy and paste into Facebook or Instagram.
- ☐ **Message a VIP.** VIP → write a message (use [Name] and it fills in each person's name), then tap the WhatsApp button next to a customer.

8. Temperatures (food safety)

- ☐ **Log a temperature.** Temps → tap a cell and enter a fridge reading. You can also do this from a delivery run while you're out.

9. Managing logins (you're the boss)

- ☐ **Open your account page** — tap your name in the top-right corner.
 - ☐ **Change your own password** under My password. Try logging out and back in with it.
 - ☐ **Add a login for your driver.** Add a login → their email + a password, choose Driver (deliveries only — no money), Create. Tell them the details. You can reset their password or remove them any time.
-

★ Before you go live — wipe your practice data

Once you're happy and ready for real customers, clear out everything you added while testing so you start clean.

Important: delete in this order. The system won't let you delete a customer who still has invoices or orders attached — so invoices first, then orders, then the customer last.

1. **Invoices & receipts** — Invoices page → on each test one, Actions → Delete invoice.
2. **Orders** — Delivery Runs → open each test day → open each test order → Delete.
3. **Daily takings** — Finance → Daily Sales → press the × on practice rows (keep real imported ones if you want).
4. **Customers** — Customers page → open each test customer → Delete.
5. **Products** — Availability → remove any made-up test products (keep your real range).
6. **VIPs** — VIP page → Remove any test entries.
7. **Extra logins** — your name (top-right) → remove any test driver logins. (Keep your own!)

When you're done, the Dashboard and Finance figures should read back to zero / empty. That's your sign you're starting fresh — from then on, every real order builds your real records.

Built for JG Foods by AXRIK. Anything not working as you'd expect, or wording you'd like changed — write it down and send it over. There's also a ? help button in the bottom corner of every admin screen.
